

YEAR 8 ADVANCED → YEAR 9 ADVANCED

Summer Maths

Ready for Year 9

Six weeks. Twenty questions a week. Every Year 8 skill that Year 9 Advanced builds on – mixed together so it sticks.

Week 1 | Week 2 | Week 3 | Week 4 | Week 5 | Week 6

NAME _____ CLASS _____

How it works

One page a week

Each week has **20 questions** and a **bonus**. Set aside about **40 minutes** – one sitting or a few short ones. Questions start easier and get a little harder through the page.

The same pattern every week

Question 1 is always fractions and integers, question 11 is always Pythagoras, and so on. If the same number keeps going wrong, that is the skill to revise before Year 9.

1	Fractions & integers	11	Pythagoras
2	Percentages & rounding	12	Area
3	Indices	13	Volume
4	Roots & surds	14	Number plane
5	Simplify & substitute	15	Gradient
6	Expand	16	y = mx + c
7	Factorise	17	Angles
8	Equations	18	Probability
9	Equations	19	Algebra in context
10	Formulas	20	Measurement in context

Why Julia? Each banner is a *Julia set*: pick a number c, then repeat $z \to z^2 + c$ for every point. Points that stay small are coloured in. Change c and you get a completely different shape – the same rule as the Mandelbrot set, seen from a different angle.

Rules of the game

- **No calculator.** Leave answers exact (e.g. $\sqrt{34}$ or 9π) unless asked to round.
- **Show working** in the box under each question.
- **Mark it yourself** using the answers at the back (pages 10–12). Each answer has a line of working to help you find a mistake.
- **Fix it.** Redo anything you got wrong a day or two later, without looking.
- ★ questions preview Year 9 (Stage 5) work. Have a go – they are the ones that will help most in Term 1.
- **Stuck?** The hints page (page 9) has the key facts and formulas.
